SUMMARY

Full-stack engineer who ships **AI-powered products end-to-end** — designing the UI in Next.js + React + Tailwind, writing the backend in Node.js / TypeScript, wiring up the LLM call, and pushing it to production. Comfortable owning features without handoffs in small-team environments. Track record of measurable wins — **60% database throughput gains** and **sub-200ms p95 latency** under concurrent load. OWASP open-source contributor.

EXPERIENCE

Associate Software Engineer — Blackcoffer

May 2025 – Nov 2025

- Shipped backend APIs and services in TypeScript / Node.js, Java, and PostgreSQL — owned features end-to-end from spec through production
- Improved database performance by **60%** through indexing, query optimization, and schema redesign; brought **p95 API latency under 200ms** on concurrent workloads
- Owned production debugging and root-cause analysis; implemented secure auth, input validation, and API hardening

Backend Engineer — Parsewave LLC (Contract / Open Source)

- Built backend pipelines for data validation, transformation, and reliable processing with strong consistency guarantees
- Contributed to architecture decisions and backend system design on the platform team

PROJECTS

FlowMind AI — AI Workflow Orchestration Engine *Next.js · Tailwind · FastAPI · Redis · OpenAI*

- Built a system letting users compose multi-step LLM pipelines: **trigger → AI step → action** — turning natural-language intent into structured workflow execution
- Designed and shipped the Next.js + Tailwind frontend for workflow authoring and execution monitoring; wired it to the backend via REST and live status updates
- Built the execution engine with async processing, step-level retries, and structured failure handling for long-running LLM calls
- Integrated OpenAI APIs for summarization, classification, and structured extraction inside user-defined workflow steps

CalmPilot — Real-Time User Platform *Next.js · React · TypeScript · Node.js · WebSockets*

- Built a Next.js + React frontend backed by a TypeScript / Node.js service for authentication, subscriptions, and user management
- Implemented real-time WebSocket connections with low-latency streaming UI updates — same architecture pattern used for conversational AI interfaces

LogIQ — Distributed Logging & AI Debugging Platform *Next.js · Node.js · Redis Streams · PostgreSQL · OpenAI*

- Designed a high-throughput log ingestion pipeline using event-driven architecture on Redis Streams, with retry handling and failure detection
- Built a Next.js dashboard with filtering, search, and AI-powered analysis to surface error patterns and suggest probable root causes from log streams

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, Python, Go

Frontend: Next.js, React, Tailwind CSS, TypeScript, HTML/CSS

Backend: Node.js, Express.js, FastAPI, REST APIs, WebSockets, Microservices

Databases: MongoDB, PostgreSQL, Redis, MySQL

Systems: Event-Driven Architecture, Async Processing, Concurrency, Distributed Systems, Queues (Redis Streams, Kafka)

AI: OpenAI APIs, LLM integration, prompt engineering

Cloud & DevOps: AWS, Docker, CI/CD, GitHub Actions

OPEN SOURCE

OWASP-BLT (Bug Logging Tool) — Backend enhancements and secure-coding contributions to OWASP's open-source security platform. **Unsiload-AI** — AI data workflow and backend tooling contributions.

EDUCATION

B.Tech in Computer Science & Engineering — CBIT, Hyderabad

Expected May 2026 • **CGPA: 8.81 / 10**
